## Poison Ivy

Poison Ivy is a very common plant in the park and can be found growing as a climbing vine or as a ground-hugging shrub. This plant is recognized by its three leaflets, which are shiny-green in the spring and summer and rusty orange in the fall. I

f you touch any part of this plant – the leaves, stem, roots, even in winter – you may break out in a serious skin rash.

*"Leaves of three, leave them be."*

## Black-legged Ticks are present at Point Pelee National Park

It is important to take steps to protect yourself and your family. Black-legged Ticks are very small and often hard to see. Here are some tips to stay safe:

- Remain on trails and avoid long grass and shrubs
- Check yourself and your children for ticks when returning from any natural area
- Use bug repellent with DEET and wear long sleeved tops and pants

## Leave natural objects where you find them

Collecting natural objects or even moving them to create a shelter on the beach is disturbing habitat of some of our most sensitive species. Leave driftwood where you see it, don't collect wood for your campfire or collect any rocks, feathers, shells, etc to take home.

Firewood and kindling is available for purchase at the Camp Store.

## Keep the Wild in Wildlife

- Please don't feed the wildlife
- Keep your food secured in the wildlife proof storage container
- Please don't disturb or destroy wildlife habitat
